Standalone AI Products

BCL Harvey AI	+ $5,600 per year*
Purpose-built for lawyers and barristers	
Legal research and case law analysis to Harvey supported databases	
Draft legal advice, submissions and contracts	
Data stored within Australia	
Word plug-in available	
Share vaults with Harvey law firms	

BCL Legora AI	+ $5,300 per year*
Purpose-built for lawyers and barristers	
Legal research and case law analysis to Legora supported databases	
Draft legal advice, submissions and contracts	
Data stored within Australia	
Word plug-in available	

Barristers' Chambers Limited

BCL TECHNOLOGY · USER GUIDE · OCTOBER 2026

Microsoft 365 Data Protection Controls

Sensitivitylabelsclassifyemailandfilessothat appropriate safeguards can be applied.

Auto is the default for new emails. Outlook may recommend a stronger label when sensitive information is detected. External communication remains supported.

Why this matters

- Helps prevent sensitive client, identity, financial and legal information being opened by the wrong person.
- Can apply protections such as enhanced encryption, sharing controls and recipient authentication when sensitive content is sent externally.
- Provides a simple, visible classification so you can make an informed choice before sending.

Document Labels

STANDARD

The default for ordinary documents without sensitive information.

SENSITIVE

File contains sensitive personal, client or legal information and additional protection is appropriate.

HIGHLY SENSITIVE

Used for the most sensitive information, where stronger protection is required, such as financial credentials or passwords.

WHEN EMAILED
STANDARD documents are emailed as regular attachments. No change.

WHEN EMAILED
Protected with added security when sent. Recipients may be required to sign in to access the content.

How It Works

Documents stored in your OneDrive or added to your emails are automatically scanned and labelled based on their content.

Emailing a Document (Attachment)

In Outlook, a new email will be set to use **Auto** labelling by default.

Auto will send the email using whichever controls are required by the attachments. SENSITIVE attachments will result in the email being sent with sensitive controls. Likewise for HIGHLY SENSITIVE.

Barristers can change this behaviour at any time by selecting the drop-down menu.

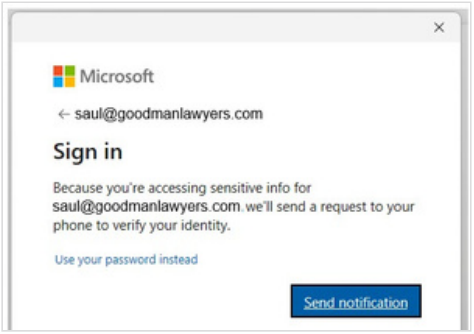
AUTO	Leave on Auto to let Outlook decide which security measures to apply based on content.
STANDARD – MANUAL	Select to bypass and not use additional security controls.
SENSITIVE or HIGHLY SENSITIVE	Select to force the additional security controls.

How Protected Emails Are Received by the Recipient

Emails with the added security controls applied (either automatically or manually assigned) require the recipient to authenticate upon opening the attachment.

This can be achieved through either a Microsoft username/password combination, or a one-time password (OTP) sent as a separate email.

Once the recipient has successfully authenticated, the document can be opened.



IMPORTANT NOTE

These controls may prevent sensitive data from being shared beyond the intended recipient. Recipients may not be able to forward or share protected attachments.

This document is accurate at the time of publishing. BCL may make minor changes to this configuration over time. These changes will be communicated as needed.
